LinkedIn — GitHub — LeetCode — Codeforces — CodeChef

Summary

Computer Science undergraduate specializing in **AI/ML, full-stack development, and scalable backend systems**. Experienced in building production-oriented applications using **Java, Python, React, Next.js, FastAPI, and cloud platforms**. Strong problem-solving background demonstrated through competitive programming and **5 hackathon awards** across national and intra-college competitions.

Education

Ramdeobaba University — Nagpur, India
B.Tech in Computer Science and Engineering — *Aug 2024 – May 2028*

- **CGPA: 9.10 / 10**
- Coursework: Data Structures & Algorithms, Distributed Systems, Machine Learning

Achievements

HackNagpur 2.0 — National Level Hackathon — 2nd Place — INR 50,000
Nagpur, India

- Built a full-stack distributed hospital triage platform and secured **2nd place** among competing teams.

Technex Hackathon — National Level — 3rd Place — INR 10,000
St. Vincent Pallotti College

Projects

APS Failure Prediction — Industrial ML System — Python, FastAPI, Scikit-learn, XGBoost, CatBoost, Next.js

- Built an end-to-end ML platform for predicting **Scania truck component failures** under extreme class imbalance using a dataset of **60,000 samples and 170 sensor features**.
- Implemented leakage-safe preprocessing, stratified validation, Logistic Regression, Random Forest, XGBoost and CatBoost with imbalance-aware evaluation using **PR-AUC, ROC-AUC, precision, recall and F1**.
- Developed a production-style FastAPI backend and Next.js dashboard with batch prediction, threshold optimization, calibration, experiment tracking, analytics and PDF reporting.

Vitality — City-Scale Hospital Triage System — Java, Spring Boot, Python, PyTorch, Next.js

- Designed a distributed healthcare triage platform coordinating multiple hospitals with **real-time surge detection and patient prioritization**.
- Implemented AI-based injury severity detection using **ResNet-34** and behavioral distress detection using OpenCV.
- Developed explainable priority scoring combining severity, waiting time and distress indicators for transparent triage decisions.

AgentFlow — Multi-Agent Marketing System — FastAPI, LangGraph, Gemini, Next.js, Supabase

- Built an autonomous multi-agent system for campaign analytics, budget planning and creative strategy generation.
- Orchestrated agents using **LangGraph** with guardrails, anomaly detection and scheduled background data synchronization.
- Developed a Next.js dashboard for campaign management, analytics and decision transparency using Supabase.

Technical Skills

Languages:	C, Java, Python, JavaScript, TypeScript, SQL
Frontend:	React, Next.js, React Native, HTML, CSS, Tailwind CSS
Backend:	Node.js, Express.js, FastAPI, Spring Boot, Flask
Databases:	MongoDB, MySQL, Supabase, Firebase, SQLite
AI/ML:	PyTorch, TensorFlow, Scikit-learn, OpenCV, NumPy, Pandas, SciPy
Cloud/DevOps:	AWS, Google Cloud, Docker, Vercel, Cloudflare, GitHub Actions
AI Systems:	LangGraph, LLM Applications, MLOps, Model Deployment, REST APIs

Certifications

Google Cloud Associate Cloud Engineer
Databricks to Local LLMs
Open Source LLMOps Solutions
Python Essentials for MLOps
Google Cloud Computing Foundations Certificate
GenAI and LLMs on AWS
Advanced Data Engineering
Deep Learning
